Iteration errors (relative fractions)

One color per scaling type/factor across all plots. Profiles: solid electrons, dashed ions where shown. Black curves: reference profiles.

Amplitude change may be set to zero by the stopping rule. BS/q traces measure successive change.

129038 mtanh NCSCAL = 1, warmup = 0

Iteration counts and pressure response 1/14 saved results Bars label the number of iterations, including 00 Hatched bars / × = nonconverged

Pressure chains: q and shear versus solved pressure / source pressure at the three Chapman points. Lines join each scaling type separately.

Star: source equilibrium. Hollow diamond: fitted baseline pressure at source q/shear.

129038 mtanh NCSCAL = 4, warmup = 0
